University of Iowa Student Files Lawsuit for Privacy Violations

April 21, 2025 | Courts

A University of Iowa student alleged that the college violated the Family Educational Rights and Privacy Act (FERPA) by not adequately protecting the online security and privacy of its students. Plaintiff Marc Muklewicz filed a lawsuit in the U.S. District Court for Southern Iowa on April 15, saying the university violated data security protocols and student privacy.

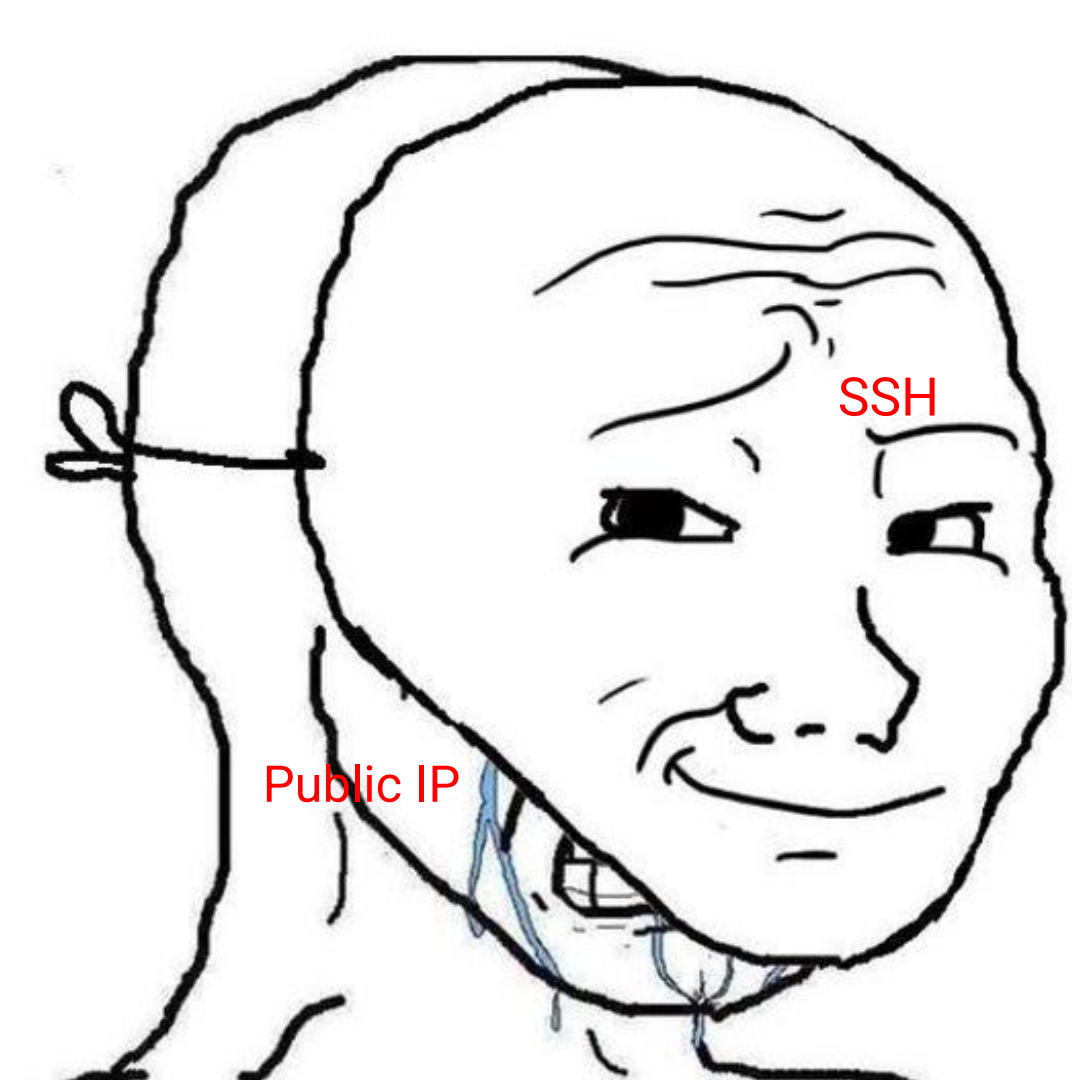
What CNP is

CNP is a private decentralized network for college students, and professionals.

Just like your college’s mailing list, you can find fellow students to talk to and collaborate with.

How it works



Demo 1

- Finding Live Friends
- Private Messaging

⚠TRADE OFFER⚠
i receive:
24 HOURS
you receive:
AN UGLY LOOKING PRIVATE MESSENGER
imgflip.com

CNP is not a private messaging app, it offers a framework for students to create, and deploy projects

The State of Anonymous College Confession Pages

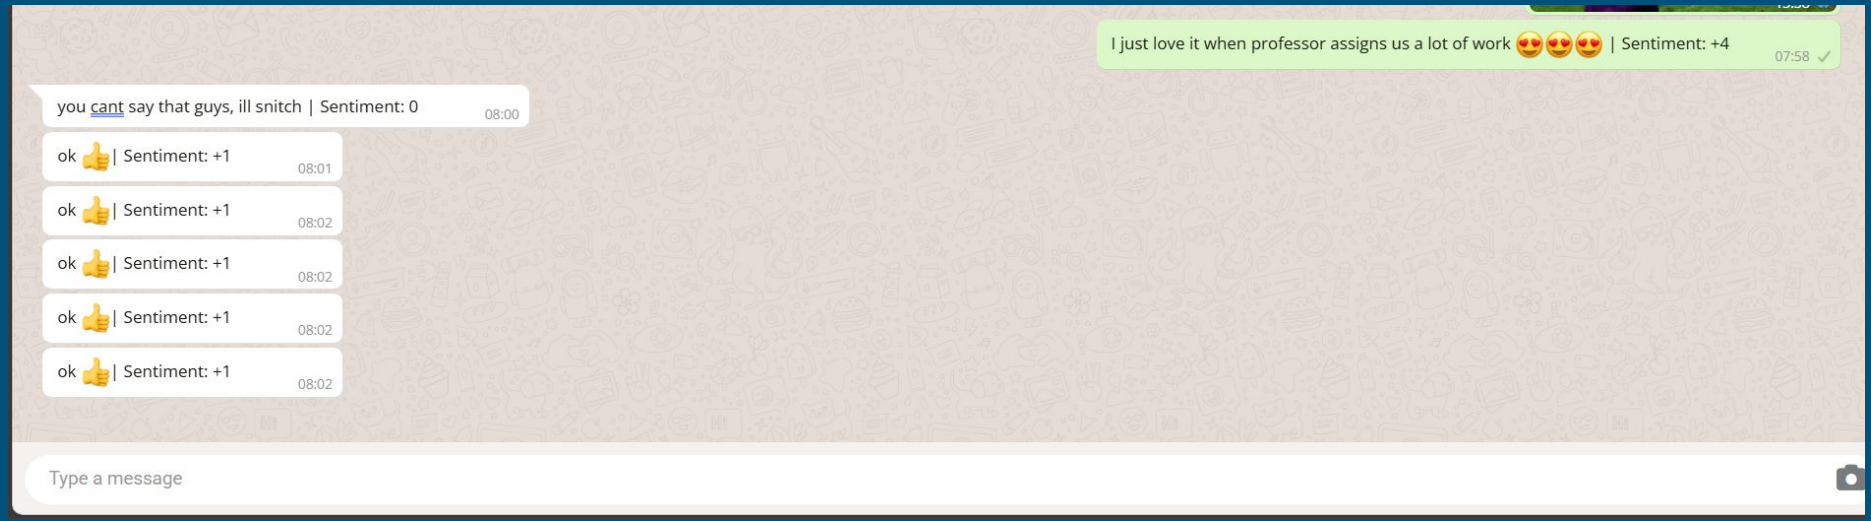
The State of Anonymous College Chats

After:



What You Can Make Using CNP

- Online Study resources
- Live Tutoring
- Anonymous Confession Sites
- Anonymous Surveys
- Club Advertisements
- Event Promotions
- Project Collaboration

ALL CENSORSHIP RESISTANT and promoted as digital billboards to students🤩🤩🤩 | Sentiment: +2

But most Importantly

It gives students the opportunity to host and promote their web apps and gain valuable market experience before launch.

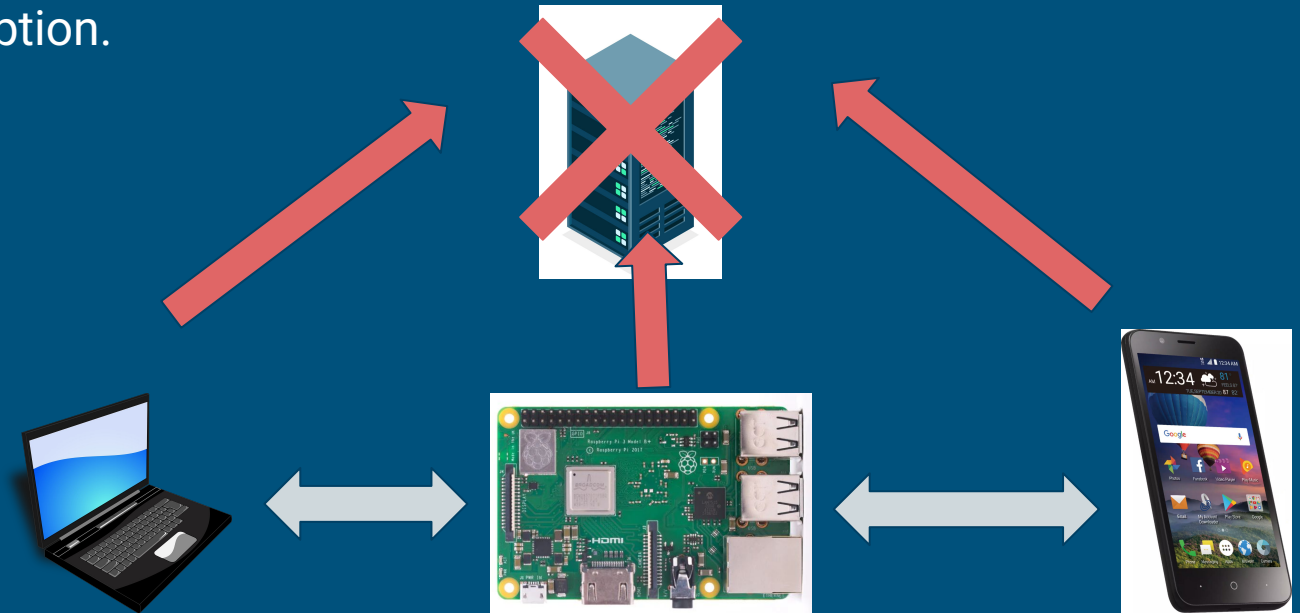
As more users join, more peers will join to serve for financial incentives, providing scalability. The project's success and potential can be attested to its acceptance on campus.

WITH MINIMAL TO NO INVESTMENT

Sustainability

Emissions of Web Services

- On-Premise servers can emit 300-1250 kg CO_2/Year per Server
- Social Media sites can emit 1000 - 2000 kg CO_2/Year per Server
- Substituting these middlemen can result in lower emissions and power consumption.



CNP After claiming sustainability by just distributing the computation

How is CNP Green???

- Studies suggest that up to 30% of servers in data centers are "zombie servers", meaning they consume energy without performing useful tasks
- The number of servers will be proportional to the number demand which makes the power consumption dynamic
- Lower computational devices mean that the idling power waste during downtimes is lower
